brandonsansone

Front end developer with a passion for creating and designing websites and user interfaces to bring a better experience to everyone. Strong understanding of technology, great eye for detail and flexible in dynamic environments

## EXPERIENCE

### Luxury Garage Sale, Software Developer

Oct 2016 - Present

Primary responsibilities are front end development with small amounts of backend development. Providing design direction for all web related content, I am the go-to person for any HTML/CSS advice. I started as a Front End Developer Intern before being promoted to Software Developer.

## Company Projects

### Intake App

Maintained and updated an internal processing tool which employees used to document and authenticate product that came through our systems. Initially developed by the head dev which I then took over and eventually became the sole maintainer.

### Company Website

Helped rebuild eCommerce site from Shopify platform into custom solution using React, Redux, Restify, AWS Solutions (DynamoDB, Elasticsearch, Cognito), and Stripe Payments. Developed a dynamically generated homepage that could be controlled via Contentful CMS. Additionally began development of a React Native port using common files to share Redux actions and reducers across both apps.

### Consignor Portal

Migrated a Salesforce user portal to standalone React/Redux application that allowed the user to edit account information, view and interact with all the product they have consigned with the company. Grabbed data from the users account in Salesforce and authenticated via a secure token passed from our main company website.

## EDUCATION

### Illinois Institute of Technology, BS in Information Technology (Cum Laude)

Aug 2014 - May 2016

### College of DuPage, Associates in Science

Aug 2012 - May 2014
